OVERVIEW

An All-Hazards Emergency Preparedness and Crisis Management System that securely stores critical information for use by facility personnel and first responders. The system provides information needed to effectively prepare for, respond to and recover from any emergency. Securely hosted by Prepared Response, the system does not require additional hardware, software or IT support. The system can also be used for day-to-day facilities security management and operations.

Rapid Responder® is a fully functional system that can be accessed via the Internet, installed on a laptop or stored encrypted on a USB drive. The system is fully browser-based featuring an easy-to-use navigation that rapidly displays site-specific information in a layered hierarchy format; allowing the user quick access without opening another file or web browser. This structure provides timely data access and relieves users from scrolling through files and pages of information that aren’t relevant in a time where seconds count.

Whether using the web version or the mobile client interface (included), the Rapid Responder Crisis Management System stores over 380 data points of information per site. From contact information to evacuation plans - not only do you have immediate access, but so do all team members and first responders.

FEATURES & BENEFITS

Unmatched Campus Experience

Rapid Responder has been deployed in K-12 and Higher Education campuses in 24 states across the nation, more than any other system of its kind. Over 1,200 state, local and federal public safety agencies use Rapid Responder.

Fast & Easy-To-Use

Rapid Responder puts you only three clicks from a command decision. Designed for mobile and low bandwidth environments, the system provides the right information, optimized for emergency situations.

Portability

Access via the Internet or plug a USB drive into any windows-based computer anywhere at any time.
Secure Access

All data and media files stored in Rapid Responder are accessed using a state of the art software application. Utilizing the software application versus a PDF guide or Word document ensures the highest level of security access.

No Third Party Contractors or Technology

Rapid Responder does not rely on subcontractors or foreign-based, off-shore computer programmers. All software design, data collection/entry and training are provided by Prepared Response employees, ensuring no hidden liability or compatibility concerns and fostering good communication throughout the implementation process.

Incident Command and Emergency Management – Not Just for First Responders Anymore

Incident Command System (ICS) is standardized across the country for first responders. Now corporations and other organizations are adopting the same National Incident Management System (NIMS) approach. Rapid Responder integrates NIMS, plus many features to support your emergency management needs.

PRIMARY MARKETS

Education

*The Most Widely Installed School Crisis Management System*

In the event of an emergency, first responders and school security personnel need instant, detailed access to your campus layout. Rapid Responder helps you collect, organize and securely disseminate this information and has been implemented in thousands of campuses across the country. In addition to providing the technology, Prepared Response brings together all necessary partners to build team consensus for each school’s emergency plans.

Healthcare

*Providing Leadership & First Responders Insight to Your Medical Center*

Rapid Responder was developed based on feedback from emergency managers, first responders and facility engineers. The system gives them access to mission critical information when responding to emergencies and can also be used for day-to-day facilities security management and operations.

Government

*Providing Information Management Solutions for Government Agencies*

Rapid Responder provides full situational awareness on key operating factors. The system is used by agencies to protect critical infrastructure including courthouses, capitol complexes and other city, state and federal sites across the U.S.

Commercial/Industrial

*Keeping Employees, Guests & Assets Protected*

Rapid Responder gives security managers and facilities staff a single source to collect, manage and distribute emergency, safety compliance information. In today’s world, business operators need to be prepared to demonstrate their readiness. Rapid Responder is designed to be extremely easy-to-use during the chaos of an emergency. It’s highly reliable, proven and has saved lives and mitigated property damage.

SAFETY ACT CERTIFIED

Rapid Responder is "all hazards" SAFETY Act Certified campus emergency preparedness solution, meaning it is certified reliable, effective and safe by the U.S. Department of Homeland Security.

“It’s really not a matter of if... it’s a matter of when an incident will occur. It’s all about being prepared.”
- High School Principal

“For the first time, we have schools, police and fire sitting down at the same table.”
- School Principal
